HQHB · SignFlow — User Guide

For: Everyone (Requestors + Approvers) **Version:** Beta 1.0 **URL:** <https://onesign.devhqhb.online>

Welcome

SignFlow is HQHB's new internal tool for document approvals. Instead of:

- WhatsApping PDFs around
- Emailing scanned signatures
- Chasing signatures over coffee

...you submit, you wait for the approval (or rejection), and you download the signed copy. **Audit trail included.**

Table of contents

1. [Signing in for the first time](#)
 2. [Setting up your signature](#)
 3. [If you're a Requestor](#)
 4. [If you're an Approver](#)

-

1. Signing in for the first time

You'll receive a welcome email from **HQHB SignFlow** with three things:

Sign-in URL: <https://onesign.devhqhb.online>
Email: your.name@hqhb.in
Password: a 10-character random string

1. Open the URL on your laptop or phone.
2. Enter the email + password exactly as in the welcome email.
3. Click **Continue**.

If you don't see the welcome email, check your spam folder. Still nothing? Ping IT (it@hqhb.in) and ask them to share your credentials directly.

2. Setting up your signature

If you're a Requestor or Approver, the first thing SignFlow asks you to do after signing in is **register your signature**.

You'll see a modal called "**Add your signature**" with two tabs:

Draw it

Use your mouse, stylus, or finger (on phone) to draw your signature directly in the canvas. The system auto-smooths pen pressure as you go. Sign as close to how you actually sign on paper as possible — this is what gets stamped onto every document you approve.

- Tap **Clear** to start over.
- Once you're happy, tap **Save signature**.

Upload an image

Already have a scanned signature? Upload it instead.

- **Choose file** → pick a PNG or JPG.
- Preview appears below.
- Tap **Save signature**.

SignFlow automatically crops the empty whitespace around your signature so it fills the signature box on documents exactly.

Updating it later

Top nav → **Signature** button. Same modal, your current signature shown at the top. Draw or upload to replace.

3. If you're a Requestor

You belong to one department (your "team"). You can submit documents for approval and track them through to completion.

Your dashboard

Welcome back, [Your name]

Quick Actions:

Leave Approval Document Approval Expense Approval
Invoice / PO Other

Tiles:

+ Make a new request
🕒 Pending requests (badge: count)
✓ Approved requests (badge: count)

Plus a small **View rejected requests** button if you have any, and **Recent activity** showing your last 4 submissions.

Submitting a new request

1. Click any **Quick Action** type, or click **Make a new request** and pick the type yourself.
2. **Upload your document** (PDF or Excel, up to 14 MB). For Leave requests, the leave-application form opens directly with editable cells.
3. **Pick an approval flow:**
 - **Single approver** — *any* approver on the target team can sign. First one wins. Faster.
 - **Multi-step workflow** — specific people sign in order. Useful for chains like *Manager* → *Director* → *CFO*.
4. **Mark where the signature goes** — click and drag on the document. A box appears showing where the approver's signature will be stamped.
5. **Choose the target team** (or workflow steps).
6. Optionally add a **note for the approver**.
7. **Submit request**.

You'll see it appear instantly under **Pending requests**.

Tracking what you've submitted

Click **Pending requests**. You see:

- The document name
- Who's expected to sign next (in workflow mode)
- A *Send reminder* button (limited to once every 24 hours)

When it's approved, it moves to **Approved requests**. Click any row to **Download** or **Print** the signed copy.

What if it's rejected?

You'll get an email. The request moves to *Rejected* with the reason the approver gave. You can fix it and submit a new request.

The leave-request form

A special case. When you pick **Leave Approval** as the type, SignFlow loads an editable leave-application form directly. Fill in:

- Personal info (name, designation, dept, manager, etc.)
- Leave dates (From / To)
- Reason

The current date is auto-stamped on application date fields. Submit when ready.

The 1-hour cooling-off window

After an approver approves your document, there's a **1-hour window** before it's truly finalised. During this window the approver can withdraw their approval. The status shows as *Approved · 1h window* with a countdown.

To skip this, ask your approver to enable **Instant approval** when reviewing — it finalises immediately.

4. If you're an Approver

You can approve documents routed to teams where you hold *signing authority*. You can also be a requestor.

Your dashboard

Good day, [Your name]

Tiles:

- 🕒 Pending approvals (badge: count)
- ✓ Approved requests
- X Rejected requests
- 🔑 Signing authority (which teams you sign for)

Reviewing a request

Click **Pending approvals** → click any request → it opens in a side drawer with the document, a workflow summary at the top (if workflow), and pinned action bar at the bottom.

The "Go to signature" button

Top-right of the drawer header. **One click takes you straight to where your signature is supposed to go**, even on long documents (works great with 60+ page PDFs).

Two-step confirmation

1. Click **Preview & approve** — your signature appears in the marker box so you can verify how it'll look on the final document.
2. Either click **Confirm approval** (signs it) or **Go back** (cancels the preview).

Rejecting

Reject button → optional reason → submit. The requestor gets an email with your reason.

Batch approving

If you have a stack of same-type requests:

1. Open **Pending approvals**.
2. Filter by type using the chips at the top (`Leave Approval` , `Document Approval` , etc.).
3. Tick the boxes on rows where it's your turn.
4. Click **Approve selected (N)** at the top.

Workflow approvals can't be batch-approved (each needs to be confirmed individually).

Withdrawing an approval

If you change your mind within the 1-hour cooling window:

1. **Approved requests** → click the row.
2. Bottom action bar shows the countdown.
3. Click **Withdraw** (silent) or **Reject with reason** (notifies the requestor).

Instant approval

If the requestor opted in to instant approval when submitting, you'll see a small ⚡ icon. Once all signers sign, the document is finalised immediately — no 1-hour wait.

5. Using SignFlow on your phone

SignFlow is built mobile-first. Everything works on phones and tablets.

Tips

- **Pinch + zoom** on PDF previews to read smaller text.
- The top nav collapses to icons only. Hit them to access *Signature*, *Password*, *Sign out*.
- Drawers (when reviewing a doc) take the full screen. The **X** closes them.
- The Esc key (Bluetooth keyboard) also closes any modal.

iPhone-specific

- **Add to Home Screen** — Safari → Share → Add to Home Screen. SignFlow runs in a standalone app-like window with the navy theme bar.
- Notch / Dynamic Island won't clip the close buttons.
- The home indicator at the bottom won't cover the Approve / Reject buttons.

Performance

Large PDFs (50+ pages) lazy-load on mobile — only the pages you're scrolling near actually render. A small **X / Y LOADED** indicator at the top shows progress. This keeps memory in check and prevents

the browser from hanging.

6. Changing your password

1. Top nav → **Password** (key icon, between *Signature* and *Sign out*).
2. Modal opens:

Change your password

CURRENT PASSWORD	[_____]	
NEW PASSWORD	[_____]	👁
CONFIRM NEW PASSWORD	[_____]	

[Cancel] [Change password]

3. Enter your current password (the one you signed in with).
4. Enter a new password — at least 6 characters.
5. Type it again to confirm.
6. Click **Change password**.

The change takes effect immediately. Your next sign-in uses the new password.

*Pro tip: pick something memorable but not obvious. Avoid your name, "password", or "qwerty". A two-word combo + a number works well: e.g. **bridge-honey-83** .*

7. Forgot your password?

1. On the sign-in screen, click **Forgot password?** (under the password field).
2. Type your work email.
3. Click **Send reset email**.
4. Check your inbox — a new password arrives titled *"Your HQHB SignFlow password has been reset"*.
5. Click ← **Back to sign-in** → enter the new password from the email.
6. Once in, change it to something memorable from the top nav.

If you don't get the email after a few minutes, ping IT (it@hqhb.in) — they can read your current password from the dashboard and share it directly.

8. Printing and downloading

Every approved document has two buttons:

ACTION	WHAT HAPPENS
Download	Saves the file. PDFs include all signature stamps.
Print	Opens a print preview in a new window. Use Cmd/Ctrl+P or pick your printer.

This works from your *Approved requests* (requestor) and from the approver's *Approved* list.

Tips

- Printing on mobile uses your phone's system print dialog. AirPrint on iPhone, Mopria on Android.
- The print preview is a fresh window — if pop-ups are blocked, you'll see an alert. Allow pop-ups for SignFlow and try again.

9. Notifications

SignFlow emails you when relevant things happen:

EVENT	EMAIL SUBJECT
Your request was approved	<i>Approved: [document name]</i>
Your request was rejected	<i>Rejected: [document name]</i>
A request needs your signature	<i>New signature request: [document name]</i>
Someone sent you a reminder	<i>Reminder: "[document name]" awaiting approval</i>
Your password changed	<i>Welcome... or Your HQHB SignFlow password has been reset</i>

In-app notifications:

- A small green / red / navy toast in the bottom-right confirming any action (Approved, Rejected, Saved, etc.).
- The dashboard tile badges update in real time (count of pending, approved, rejected).

10. Privacy and security

What's stored

- Your name, email, work department / signing authority.
- A bcrypt hash of your password (one-way — not even IT can read it).
- Your signature image.
- Every document you've requested or approved, with timestamps.

Who sees what

- **You** — your own requests, your own signature, anything routed to you for approval.

- **Approvers on your team** — requests routed to them.
- **IT Admin** — everything, including the current plaintext of your password (for support purposes, since SendGrid isn't always available). This is acceptable because this is an internal-only HQHB system. **You can change your password any time** to invalidate the value the admin sees.

Best practices

- Don't share your password — change it instead.
- Sign out when using a shared computer.
- Spot a request you didn't expect? Reject it with a reason.

Getting help

ISSUE	REACH OUT
Can't sign in	it@hqhb.in
Need a new signature uploaded	it@hqhb.in
Request stuck pending	Send a reminder first (24h cooldown), then contact the approver directly.
Bug or weird behaviour	it@hqhb.in with a screenshot + URL

Welcome aboard. Happy signing.
