

Beta Onboarding Checklist

Day -3 through day +14 plan · Beta 1.0

SignFlow Beta — Onboarding Checklist

A step-by-step list for the IT admin to roll out SignFlow internally. Check each item as you go.

Phase 1: Before the launch (Day -3 to -1)

Environment

- ☐ SignFlow UAT is reachable at <https://onesign.devhqhb.online>
- ☐ You can sign in as admin (`it@hqhb.in`)
- ☐ SendGrid is configured **or** you've decided to share passwords manually
- ☐ Database is on a server with regular backups
- ☐ HTTPS certificate is valid

Your own setup

- ☐ You've signed in as admin and registered your own signature
- ☐ You've changed your default password to something only you know
- ☐ You've added a profile photo (optional — not yet supported)

Documentation prep

- ☐ `docs/user-guide.md` → convert to PDF (use any markdown-to-PDF tool)
- ☐ `docs/quickref.md` → convert to PDF
- ☐ `docs/onboarding-form.csv` → upload to Google Sheets, set sharing to *Anyone with link can comment*
- ☐ `docs/launch-announcement.md` → pick the appropriate template, customise

Team setup

- ☐ List the departments / teams that will go on SignFlow
 - ☐ Identify each department head — they'll be approvers
 - ☐ Decide who else in each team gets an approver role (typically 1–3 per team)
-

Phase 2: Collect data (Day -1 to +3)

Distribute the form

- ☐ Email each department head with:
 - Link to the Google Sheet (one per team or shared)
 - One-paragraph context: *"We're rolling out a new internal tool for document approvals. Please fill in this form with your team's members so I can create accounts."*
 - Deadline (3 days)
 - Your contact for questions

Track responses

- ☐ Department 1 — submitted ☐
- ☐ Department 2 — submitted ☐
- ☐ Department 3 — submitted ☐
- (etc.)

Follow up

- ☐ Day +2 — gentle reminder to anyone who hasn't replied
- ☐ Day +3 — direct ping to stragglers

Phase 3: Create the teams (Day +4)

For each completed form:

- ☐ Open SignFlow → Admin → **Onboard team**
- ☐ Step 1 — choose *Create new team* + type the team name
- ☐ Step 2 — paste / upload the member list from the filled form
- ☐ Step 2 — verify roles (approvers vs requestors) match the form
- ☐ Step 3 — keep *Send welcome emails* ON (or off if you're sharing manually)
- ☐ Step 3 — click **Create users & send invites**
- ☐ Step 4 — note any failures, fix them
- ☐ Confirm the team appears under Admin → Teams & authority with the right approvers + members

Verify each user got their welcome email

- ☐ Spot-check 1 user per team — email arrived, password works
- ☐ Any spam folder hits? Whitelist `noreply@hqhb.in` org-wide

Phase 4: Launch (Day +5)

Send the announcement

- ☐ Pick the right template from `docs/launch-announcement.md`
- ☐ Customise the URL, dates, your sign-off
- ☐ Attach `user-guide.pdf` + `quickref.pdf`
- ☐ Send to all users (BCC them — keeps the list clean)

Update internal channels

- ☐ Post the WhatsApp / Teams short version
- ☐ Pin the announcement in your main channel

Be available

- ☐ Block 2 hours on launch day for support questions
- ☐ Have the Admin Handbook open

Phase 5: Stabilise (Day +6 to +14)

Daily checks

- ☐ **Email log** — any `failed` entries? Investigate
- ☐ **Reports** — pending count climbing? Approvers might need a nudge
- ☐ Personal mailbox — any user questions in spam?

After 7 days

- ☐ Pull **Reports** → **Download full CSV** as a baseline
- ☐ Count: how many users have actually signed in? (Low ratio = comms problem, not product problem)
- ☐ Spot-check 3 random requests end-to-end for correct routing

After 14 days

- ☐ Send the *Day 14 retrospective* from `launch-announcement.md`
- ☐ Collect feedback in a single email thread
- ☐ Prioritise the top 3 most-requested improvements
- ☐ Bring them up with the developer team

Phase 6: Steady-state (Day +15 onwards)

Move to the daily admin routine in `admin-handbook.md` → section 11.

Rollback plan (just in case)

If something is fundamentally broken:

1. **Don't panic.** Past requests and signatures are persisted in the database.
 2. Reach out to dev — every change is in Git, every commit is small, rollback is one command.
 3. Worst case, tell users to fall back to email-the-PDF for 24h while we fix.
