

SignFlow — Approver Guide

Reviewing and signing documents

Before you start

1. Sign in at <https://onesign.devhqhb.online/> and change your password.
2. Register your signature (draw or upload) — it's stamped onto documents when you approve.

Your home screen

You'll see four areas: **Pending approvals**, **Approved**, **Rejected**, and **Signing authority** (the teams that have granted you the right to sign).

The Approver home — pending approvals, history, and your signing authority.

Review & sign

1. Open a pending request and review the document.
2. Check the **workflow chain** — who has already signed and who is next.
3. If it's your turn, your slot is highlighted **“YOU SIGN HERE.”** Click **Approve & sign** to stamp your signature, or **Reject** with a reason.
4. If it's not your turn yet, you'll see “Awaiting signature from [Name]” and the document is view-only until it reaches you.

Open a pending request to review the document and sign when it is your turn.

The one-hour window

For standard (non-instant) approvals, you have **one hour** to withdraw your approval while the status shows “**Approved · 1h window.**” After the hour passes — or immediately, when Instant Approval was set — your signature is locked in.

When everyone has signed

Once all signers complete, the request is finalised: the requestor is emailed automatically and the signed PDF becomes downloadable. Every action is time-stamped for the audit trail.

Reject early if something is wrong — a clear reason helps the requestor fix and resubmit quickly.
