

SignFlow — Frequently Asked Questions

Quick answers for everyone

What is SignFlow?

HQHB's digital signature and approval system. You submit documents for signature, route them to the right approver(s), and get a signed, fully audited copy back — all online.

Do I need to install anything?

No. SignFlow runs in your web browser. Just go to <https://onesign.devhqhb.online/>.

How do I get an account?

IT creates it for you. You'll receive a login email and a temporary password; change the password and register your signature on first sign-in.

What file types and sizes are supported?

PDF or Excel documents, up to 14 MB each.

How do I sign a document?

Register your signature once (draw or upload). After that, open a pending request and click Approve & sign — your signature is stamped onto the document.

What is the one-hour window?

For standard approvals you can withdraw your approval within one hour. Set Instant approval on a request to finalise immediately and skip the wait.

Can a document need several signers in a specific order?

Yes. Choose Multi-step workflow when creating the request, add the signers, and they'll be asked to sign in the order you set — even across teams.

I forgot my password.

Use Forgot password? on the login screen to get a reset by email, or contact IT and we'll issue a new temporary password.

Is it secure and audit-ready?

Yes. Access is role-based, every action is time-stamped, and admins can export a full audit trail. Signed PDFs preserve the complete approval history.

Who do I contact for help?

IT at it@hqhb.in, or taha.chunawala@hqhb.in.
